SEENOI NAURORI

JUNIOR DATA ANALYST

GitHub: github.com/seenoinaurori

PROFILE

Entry-level data analyst with hands-on PLP projects using Python, pandas, SQL/SQLite, Excel, and data visualization. Experienced in reproducible analysis, data-quality checks, experiment interpretation, and communicating evidence with clear caveats.

TECHNICAL SKILLS

Python, pandas, NumPy, SQL, SQLite, Excel, Jupyter Notebook, Matplotlib, exploratory data analysis, data cleaning, KPI reporting, hypothesis testing, cohort and RFM analysis.

DATA ANALYTICS PROJECTS

PesaPap Growth Analytics | Python, pandas, SQL/SQLite, NumPy

- Analysed 12,000 synthetic transactions worth KES 15.98M and evaluated an onboarding experiment; measured Variant B at 13.81% conversion versus 10.46% for A (+3.34 percentage points; chi-square p=0.0052, 95% CI 1.00-5.67 pp), then recommended a guarded phased rollout.

Duka Electronics H1 Board Report | Python, pandas, Matplotlib

- Summarised 1,000 synthetic orders and KES 52.46M in first-half sales; identified Computing as 48.6% of revenue and June sales 64.1% above February, translating the findings into a board-ready report and monitored pilot recommendation.

Gikomba Stall Analysis | Python, pandas

- Analysed 14 days of stall sales totalling KES 46,450; quantified 10.7% week-on-week growth and 156% higher average weekend than weekday sales, with reorder-level produce flagged for restocking.

EDUCATION

PLP Data Analytics Program | Cohort 1

- Coursework includes data analysis, data cleaning, exploratory analysis, reporting, and growth analytics projects.

SELECTED PORTFOLIO

Capstone: github.com/seenoinaurori/Capstone-Build-Sprint | Growth analytics: github.com/seenoinaurori/plp-da-a7-pesapap-growth-analytics | Board report: github.com/seenoinaurori/plp-da-a6-duka-board-report

Project datasets are synthetic; results describe coursework analyses and are not production-business outcomes.
